

APMI - A platform for process transparency and decision-making

–autonomous, semantic, and enterprise-wide–

How do you manage costs, risks, and transformation when the actual business processes are not transparent?

APMI is an autonomous process intelligence platform that makes real business processes visible and measurable across systems, without manual modeling and without dependence on individual systems. APMI provides a robust decision-making foundation for management and finance, reduces costs and risks, and accelerates transformations, enterprise-wide, scalable, and cloud-ready.

Benefits & added value of APMI

- Autonomous, cross-system detection of real business processes
- Zero Tagging
- End-to-end transparency across ERP, MES, and legacy systems
- Reduction of process complexity and analysis effort
- Measurable cost and productivity gains
- Faster and more informed decisions
- Reduction of operational risks and process deviations

Unique differentiation

- No manual modeling
- Processes, steps, and decisions are understood in business terms, not just described
- Autonomously scalable without increasing complexity
- Cross-system and vendor-independent
- Explainable results instead of isolated dashboards
- Decision focus instead of analysis focus
- Platform, not another siloed solution
- **80 percent time savings in projects**
- **50 percent lower project costs**

Typical use cases

- End-to-end transparency across business processes
- Identification of cost and efficiency potential
- Management and safeguarding of transformations
- Stabilization of critical business and operational processes
- Governance, risk, and compliance transparency
- Management and decision support
- Reduction of external analysis and consulting costs

Which challenges do you want to address with your business processes?

CEO / CFO

Manage. Decide. Reduce risks.

- Transparency over real business processes as a basis for decision-making
- Measurable identification of cost, efficiency, and value creation potential
- Reduction of strategic and financial risks
- Sound management of transformations and initiatives
- Fast, reliable ROI through fact-based decisions

CIO / CTO

Simplify. Decouple. Scale.

- System- and vendor-independent process intelligence
- Decoupling of processes and applications
- Reduction of IT and integration complexity
- Zero Tagging, keine manuelle Modellierung oder Vorarbeit Zero tagging, no manual modeling or preparatory work
- Scalable, cloud-ready platform
- Data sovereignty

COO / CDO / Process management

Understand. Optimize. Stabilize.

- End-to-end transparency across operational business processes
- Autonomous detection of bottlenecks, deviations, and inefficiencies
- Semantic understanding of process steps and decisions
- Stabilization of critical business and operational processes
- Sustainable development of process knowledge without manual analysis effort

Discover autonomous process intelligence with APMI®
